reates the electrochemical gradient of sodium and potassium, providing the energy for

```
Na+/K+-exchanging ATPase (EC 3.6.3.9) alpha chain precursor - sheep
N;Alternate names: sodium pump alpha chain; sodium/potassium-dependent ATPase alpha chai;
C;Species: Ovis orientalis aries, Ovis ammon aries (domestic sheep)
C;Date: 17-Mar-1987 #sequence_revision 17-Mar-1987 #text_change 09-Jul-2004
C;Accession: A01074; A35426
C;Accession: A01074; A35426

"Structure-function analysis of encyl thioester reduct mitochondrial maintenance.";
J. Mol. Biol. 327:47-59(203).
-1- FUNCTION: Required for respiration and the mainten mitochondrial compartment. May have a role in the synthesis of fatty acids.
-1- CATALYTIC ACTIVITY: Acyl-(acyl-carrier protein] + 2,3-dehydroacyl-(acyl-carrier protein] + ADPH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Brown S.D., Elliot R.M., Fleetwood D.J., McCallum N.G., Rossback Stuart G.S., Weaver J.E., Webby R.J., de Bruijn F.J., Ronson C.T. Airenne T.T., Torkko J.M., Hiltunen J.K.,

"Crystal structure of enoyl thioester reductase 2."

"Crystal structure of enoyl thioester reductase 2."

"Submitted (JUN-2002) to the PDB data bank.

-!- FUNCTION: Required for respiration and the main mitochondrial compartment. May have a role in the synthesis of fatty acids.

-!- CATALYTIC ACTIVITY: Acyl-[acyl-carrier protein] + NADPH.

2,3-dehydroacyl-[acyl-carrier protein] + NADPH.

2,3-dehydroacyl-[acyl-carrier with ETR1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             25-OCT-2004
